PROBLEM–SOLUTION FIT

Project: Comic Craft – AI Comic Story Creator using Gemini Models

Date	Team ID	Maximum Marks
15 March 2026	SWTID-2026-8237	5 Marks

1. CUSTOMER SEGMENT(S) [CS]

• Non-artists and casual users who want to create comics.

• Storytellers and hobbyists with creative story ideas.

• Users who want personalized comics from a simple prompt.

• Users interested in choosing character, setting, tone and art style.

2. PROBLEMS / PAINS + ITS FREQUENCY [PR]

• Creating a complete comic manually requires story writing, dialogue creation and illustration skills.

• Maintaining a cohesive story and matching visuals across panels can be difficult.

• Users need a simple way to turn an idea into a complete comic.

• These challenges can occur whenever a user wants to create a new personalized comic.

3. TRIGGERS TO ACT [TR]

• Having a new comic/story idea but not the artistic or writing skills to develop it.

• Wanting to quickly generate a personalized comic from a prompt.

• Wanting to change the story tone or art style and regenerate the comic.

• Wanting a downloadable PDF after reviewing the generated comic.

4. EMOTIONS BEFORE / AFTER [EM]

Before: Users may feel difficulty, uncertainty or lack of confidence when converting an idea into a complete comic.

After: The generated preview and PDF provide a tangible, visually engaging comic and a simpler creative experience.

5. AVAILABLE SOLUTIONS – PROS & CONS [AS]

Existing/manual approach:

Pros – Full human creative control; familiar tools can be used for writing and drawing.

Cons – Requires time, writing ability, drawing/illustration skills and manual panel organization.

Comic Craft approach:

Pros – Automates outline, narration, dialogue, illustrations, layout and PDF export; accepts simple user inputs; supports customization.

6. CUSTOMER LIMITATIONS – e.g. BUDGET, DEVICES [CL]

• Users may not have professional drawing or comic-design skills.

• Users may prefer a simple web interface rather than specialized creative software.

• The project is designed for browser-based interaction and local deployment in the documented version.

• The project document does not specify a customer budget limit.

Cons – The supplied project document does not specify comparison results against particular competing products or services.	
7. BEHAVIOR + ITS INTENSITY [BE] • Users enter a story prompt and preferences for character, setting, tone and art style. • Users review the generated comic panel-by-panel. • Users can regenerate with different tone/art-style choices. • Users download the completed comic as a PDF. • Behavior intensity: repeated interaction is supported through customization and the "create another comic" flow; exact usage frequency is not specified.	**8. CHANNELS OF BEHAVIOR [CH]** ONLINE: • Comic Craft web interface. • Fast API endpoints for direct/API-based comic generation. • Local browser access through the documented Fast API server. OFFLINE: • Downloaded PDF comic can be saved, printed or shared offline.
9. PROBLEM ROOT / CAUSE [RC] • Comic creation normally combines several separate skills: story planning, narration/dialogue writing, visual illustration and panel layout. • Users may lack one or more of these skills. • Manual coordination of text, images and panel structure takes effort. • Comic Craft addresses this by integrating AI text generation, image generation, layout building and PDF export into one workflow.	**10. YOUR SOLUTION [SL]** Comic Craft is a web-based AI comic creator that transforms a user's story prompt and preferences into a personalized comic. Solution workflow: 1. Collect story prompt, character name, setting, tone and art style. 2. Gemini Flash generates a structured 5-panel outline. 3. Gemini Pro expands the outline into narration and character dialogue. 4. Stable Diffusion generates comic-style illustrations for each panel. 5. The system builds the comic layout. 6. FPDF exports the complete comic as a downloadable PDF. The solution provides an end-to-end comic creation experience through a FastAPI + HTML/CSS/Jinja2 web interface.

Source basis: Comic Craft project document and the supplied Problem–Solution Fit Canvas template.
